The New Clean.™

NanoSeptic® Skins and Mats Turn Dirty High Traffic Touchpoints into Continuously Self-Cleaning Surfaces.

This facility is now using Nanoseptic self-cleaning surface technology. Powered by light, NanoSeptic surfaces contain mineral nano-crystals that create a self-cleaning oxidation reaction that's stronger than bleach. These surfaces work to continuously oxidize all organic contaminants. Unlike traditional cleaners and disinfectants, the NanoSeptic surface uses NO poisons, heavy metals or chemicals.

So go ahead, open the door to a cleaner world...you don't even have to use your elbow.
